Free Resource: Cryptocurrency Safety Checklist

Keep this 1-page safety checklist before using any wallet or exchange.

[ ] Write your recovery phrase on paper and store it offline in two safe places.

[ ] Never screenshot your recovery phrase or store it in cloud notes or email.

[ ] Enable app-based two-factor authentication (2FA) on any exchange account.

[ ] Double-check the network and address before sending any transfer.

[ ] On P2P, confirm funds in your actual bank or payment app—never trust an SMS or screenshot alone.

[ ] Ignore anyone promising guaranteed returns or asking you to send crypto to 'unlock' profits.
